Faced an error

query is executing successfully, but Snowflake is returning 0 rows

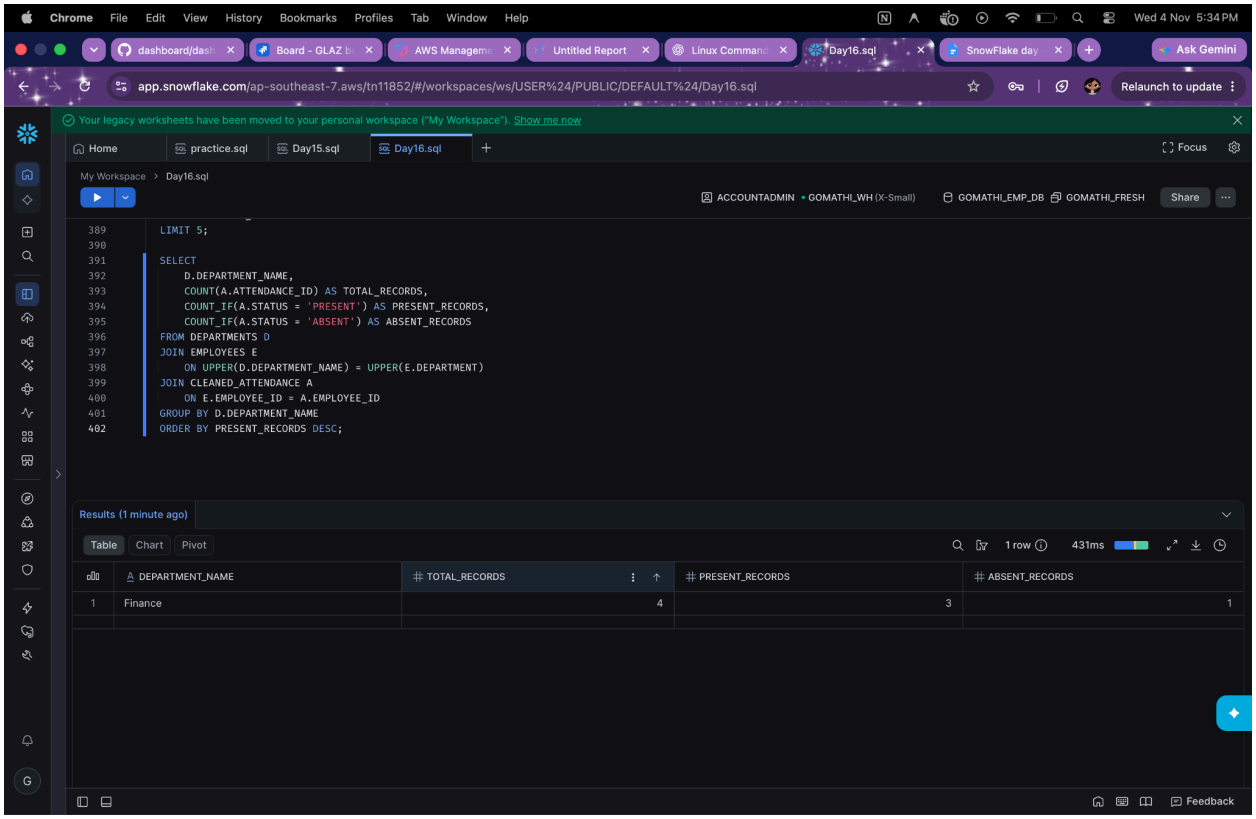

The existing `employees` table uses IDs 2001–2008, but the new Attendance and Payroll CSVs use IDs 1–5. Hence this has created a mismatch in foreign keys

I have updated my attendances and payroll references to the employee table.

Department-wise attendance

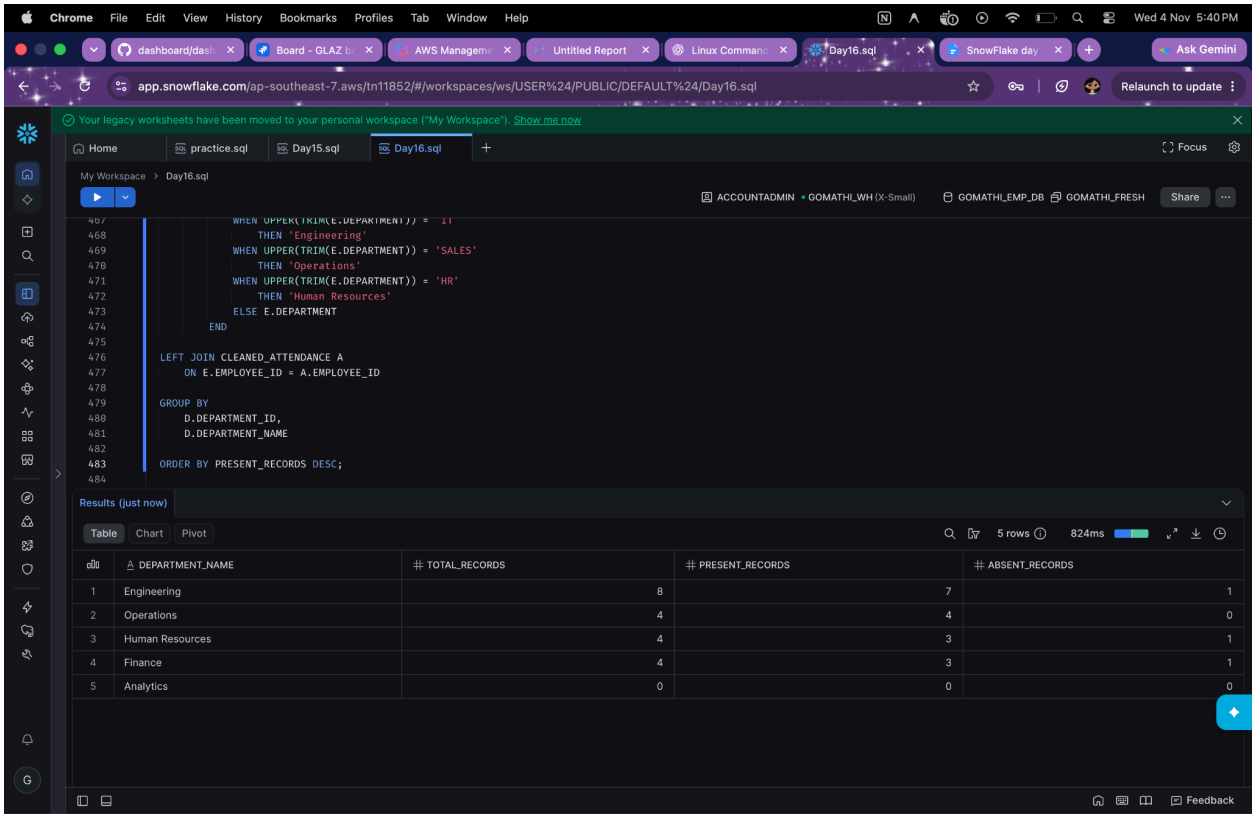

Error

another data-matching issue. Only Finance is appearing because the department names in the existing `employees` table may not match the department names in `departments`.

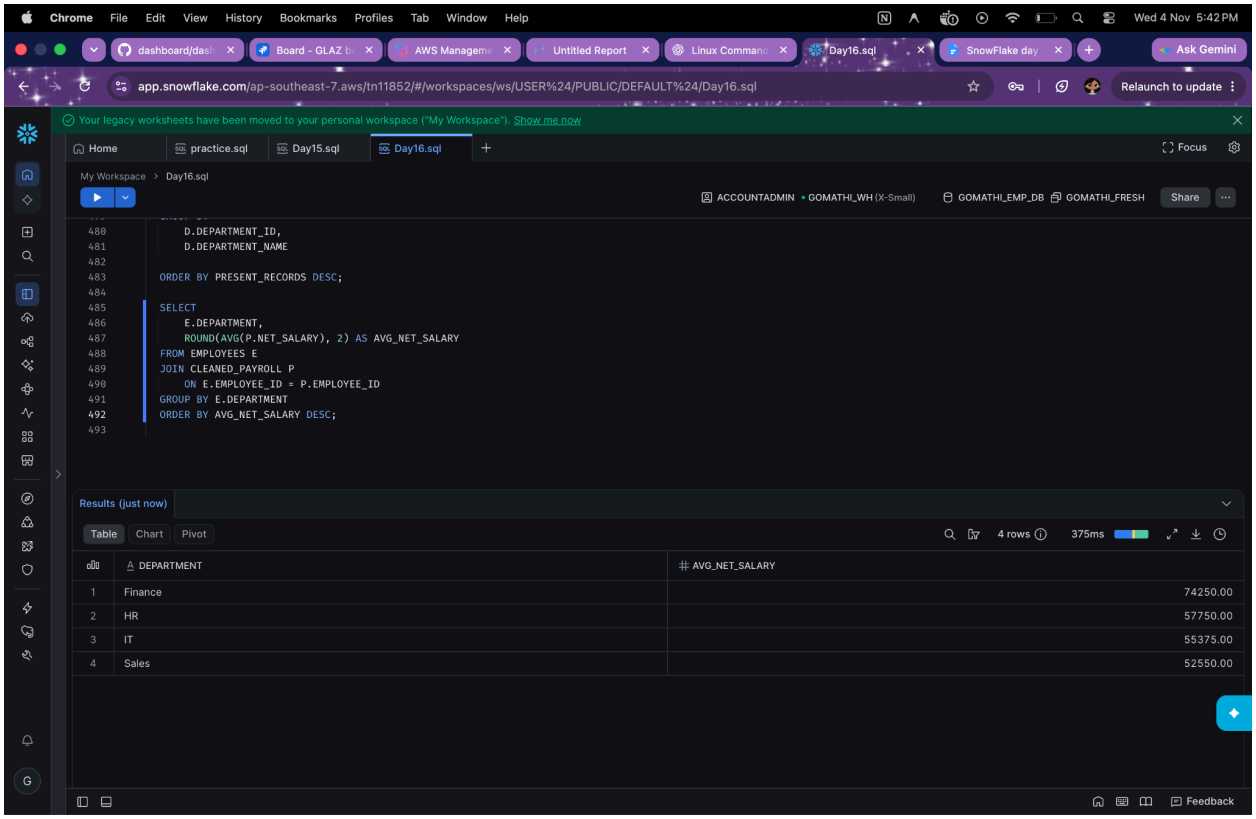

The query used is an INNER JOIN, which excludes departments without matching employee records.

I have further found a lot of naming inconsistencies between my employees table and my department table.
For example hr as human resource

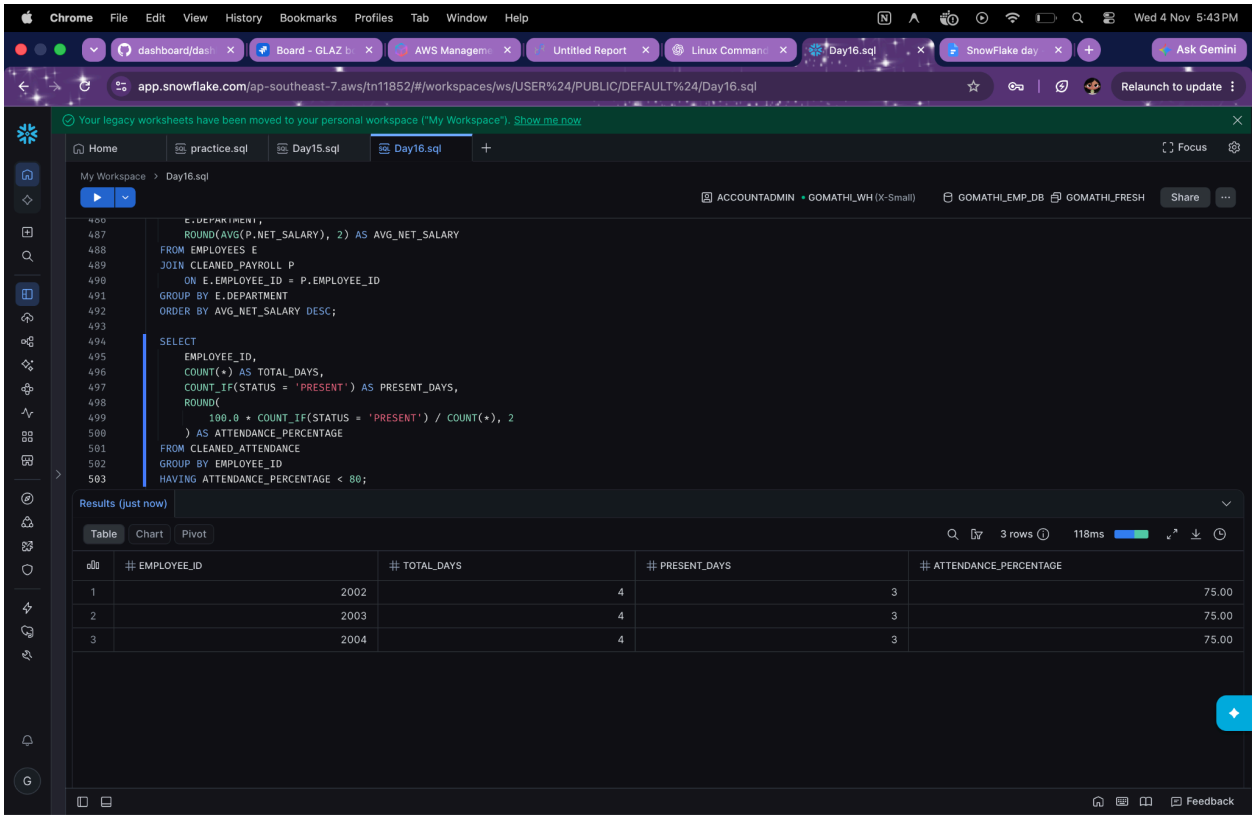

I have used case and left join to troubleshoot it

Average net salary by department

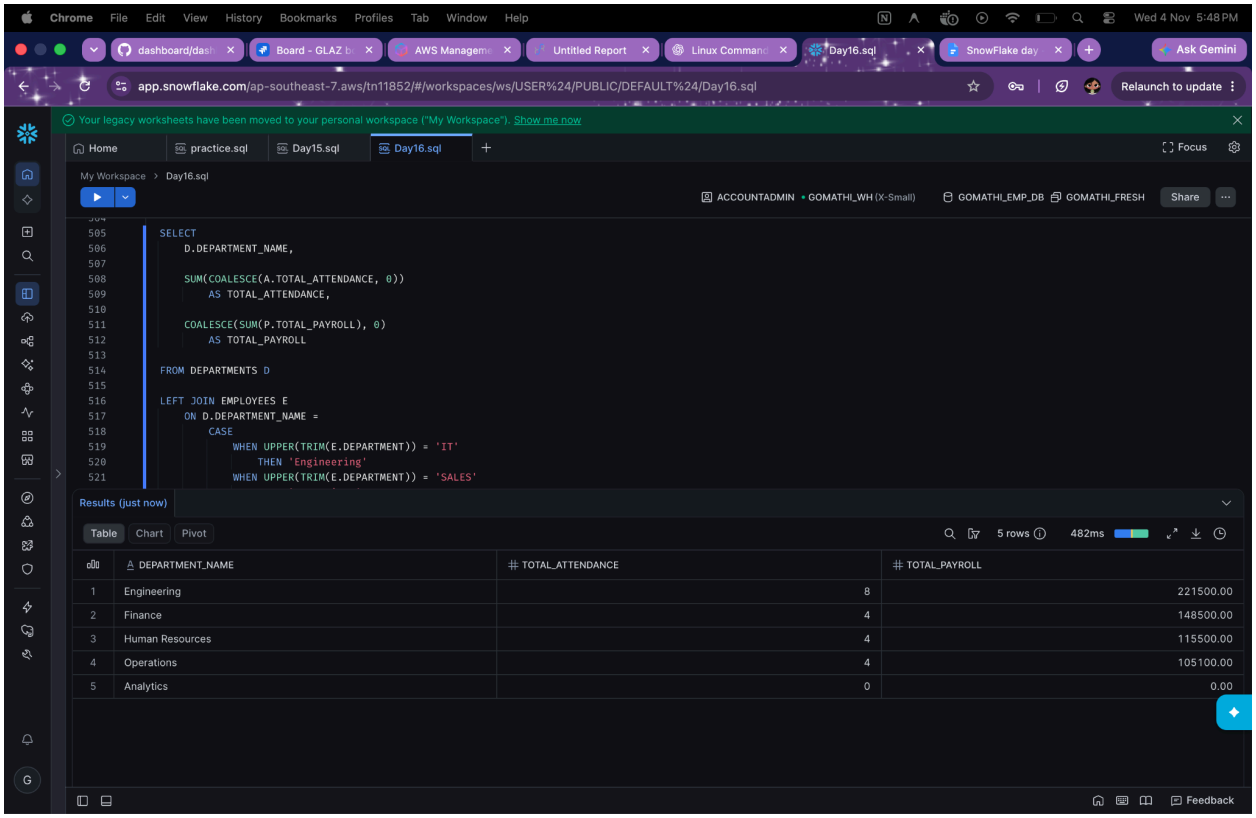

Employees with low attendance
